Susie and Doug - EPA is approving the Revised Memorandum for the Proposed Analysis of Dioxin Samples in East Waterway and, per the memo, all surface and subsurface sediment samples can be analyzed for dioxins. To inform additional surface sediment samples, EPA is further requiring that the EWG conduct a breakout analysis of source control sample MH-Comp 3, where basin samples B-17, 18 and 19 are composited and B-21 and B-22 analyzed individually. Based on the results of this source control analysis, EPA will make a decision on analysis of additional surface sediment samples. Candidates for this later analysis include, but are not limited to, surface sediment samples 122, 126 and 132.

Should you have any questions about EPAs approval of the Memo for dioxin analysis of surface and subsurface samples, please give me a call.

regards,

Ravi

Dioxin memo revised

Ravi,

Here is the revised dioxin memo with all the comments addressed. I would like to ship samples early next week so please let me know as soon as possible if we are approved to analyze the samples.

Thanks.

Susie
